ABSTRACT:

Styrene oxide with high selectivity (>60%) at high conversion (>50%) was produced by **biphasic** epoxidn. of styrene by t-Bu hydroperoxide, using potassium chromate or potassium dichromate as catalyst in the presence of water. The reactants and products exist in the non-aqueous (organic) phase, while the catalyst exists in the aqueous phase, and is easily recovered. Both potassium chromate and potassium dichromate catalysts show high activity in the ***biphasic*** epoxidn., however, the preferable catalyst is potassium chromate.

SUPPL. TERM: styrene epoxidn tertbutyl hydroperoxide potassium chromate catalyst aq medium

INDEX TERM: Epoxidation catalysts

~~(aqueous **biphasic** selective epoxidn. of styrene by t-Bu hydroperoxide to styrene oxide using potassium chromate or potassium dichromate recoverable catalyst)~~

INDEX TERM: 96-09-3P, Styrene oxide

ROLE: IMF (Industrial manufacture); PREP (Preparation)
(aqueous **biphasic** selective epoxidn. of styrene by t-Bu hydroperoxide to styrene oxide using potassium chromate or potassium dichromate recoverable catalyst)

INDEX TERM: 75-91-2, tert-Butyl hydroperoxide 100-42-5

, Styrene, reactions

ROLE: RCT (Reactant); RACT (Reactant or reagent)
(aqueous **biphasic** selective epoxidn. of styrene by t-Bu hydroperoxide to styrene oxide using potassium chromate or potassium dichromate recoverable catalyst)

INDEX TERM: 7778-50-9, Potassium dichromate 7789-00-6,

Potassium chromate

ROLE: CAT (Catalyst use); USES (Uses)
(epoxidn. catalyst; aqueous **biphasic** selective epoxidn. of styrene by t-Bu hydroperoxide to styrene oxide using potassium chromate or potassium dichromate recoverable catalyst)
